B

1. (Amended) A cable, comprising:
a plurality of transmission media;
a central conductive core having a surface defining channels within which each of the plurality of transmission media are individually disposed; and
an outer jacket maintaining the plurality of data transmission media in position with respect to the core.
2. (Amended) The cable of claim 1, wherein the channels of the central conductive core are separated by fins, the cable further comprising:
a conductive shield covering the channels and in contact with the fins.
